1. Короткі теоретичні відомості про середовище розробки проекту

Microsoft Visual Studio — серія продуктів фірми Майкрософт, які містять інтегроване середовище розробки програмного забезпечення та низку інших інструментальних засобів. Ці продукти дають змогу розробляти як консольні програми, так і програми з графічним інтерфейсом, включно з підтримкою технології Windows Forms.

2. Короткі теоретичні відомості про візуальні об'єкти (компонентів), що використовуються.

MenuStrip – створює меню, що настроюється

GroupBox – групу ϵ набір елементів керування

PictureBox — відображає графічні файли, такі як растрові малюнки та піктограми

TrackBar – дозволяє користувачу задавати значення на шкалі масштабу, переміщуючи курсор

Label – відображає недоступний для зміни користувачем текст

Button – запускає, зупиняє чи перериває процес

3. Вихідний текст програми

Form1

                                                       private void AboutBox1_Load(object sender, EventArgs e)
                                                        }
                                                        private void okButton_Click(object sender, EventArgs e)
                                                                                   Close();
                                                        }
                           }
}
```

4. Знімок інтерфейсу програми з результатами роботи

5. Висновки

В цій лабораторній роботі я ознайомився з Microsoft Forms. Також я ознайомився з інтерфейсом програми і навчився створювати просту форму з «редактором» зображення.
